### PROCLEAN GEL

Page 1

Version 2

#### **1. PRODUCT DESCRIPTION :**

PROCLEAN GEL a ready to use reclaiming green gel.  
Shelf life : one year.

#### **2. APPLICATION :**

PROCLEAN GEL is a rapid reclaiming gel particularly recommended for cleaning large vertical screens. Because of its consistency it does not drip and therefore retains its working strength all over the screen. It has no smell, no chlorine and is non-corrosive.

#### **3. USE :**

Remove all the inks from the screen with a water emulsifiable cleaner. Rinse with water. Dry off the excess water to avoid any dilution of the PROCLEAN GEL.  
Evenly spread the gel on both sides of the screen using the brush. Leave for about five minutes and wash off with a high pressure water jet. It is also possible to rub the screen until the emulsion disappears. Then wash with a lot of water.

Never let the PROCLEAN GEL dry on the screen, the combination of the emulsion and gel is very difficult to get off. Make sure you keep the process of degreasing and coating separately from each other, the vapour coming from the gel condenses on the mesh and give a poor coating adhesion.

#### **4. SUPPLIED IN :**

5 and 30 kg.
